

Name:

Giraffes

Information about giraffes.

Appearance:

Giraffes are the tallest land animals on Earth. They have long necks and can reach up to 18 meters tall. Giraffes have a beautiful coat covered in brown spots.

Interestingly, no two giraffes have the same pattern of spots.

Diet:

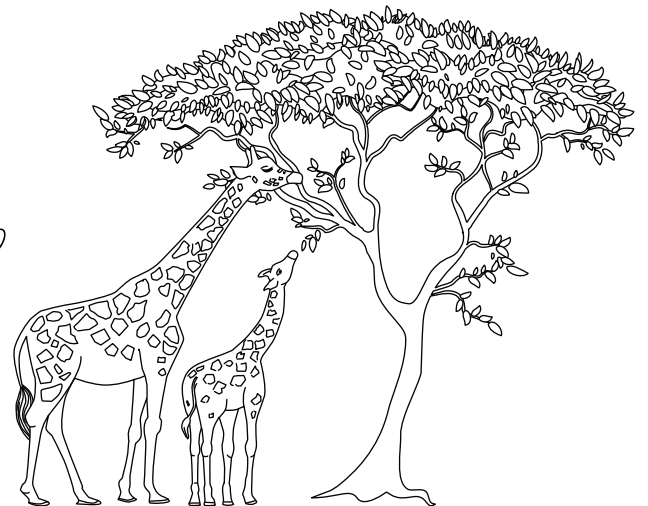

Giraffes are herbivores, which means they only eat plants. Their favorite foods are leaves from tall trees. With their long necks and powerful tongues, they can easily reach the leaves of tall trees.

Habitat:

Giraffes live in the grasslands of Africa. This habitat provides them with plenty of food to eat.

Interesting fact:

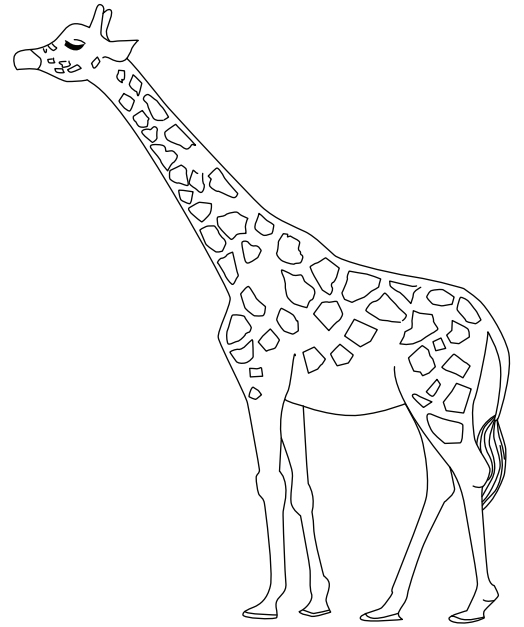

Giraffes have long tongues that can grow up to 45 centimeters long.
