

Working Scientifically to answer the question:

How do the phases of the moon affect tide levels?

Comparing tide levels at various phases of the moon.

Constructing line graphs.

Analysing and interpreting data.

- Work in groups of four.
- Each person is responsible for creating a line graph.
- Work together to analyse and interpret the results.

1) Examine data for a given location: Gladstone, Queensland, Australia.

2) Plot the water level measurements for each of the highlighted days on the chart. (Peak times for each phase of the moon.)

3) Form a line graph for each phase of the moon.

4) Compare the graphs. What differences or similarities can you see?

5) Formulate an answer to the question: How do the phases of the moon affect tide levels?

Gladstone is located on the central coast of Queensland, Australia. The city is known for its deep water harbour and port facilities.

Gladstone, Queensland, Australia. Tide Levels for January 2016

Extension Activity:

• Print the tide time chart.

• Colour the highest and lowest tide measurements for each day.

Why do you think high tide and low tide occur at different times each day?

● Third Quarter

● NewMoon

● First Quarter

○ Full Moon

Tide Levels for Gladstone, Queensland. Date: _____ Phase of Moon: _____

- Print a tide levels graph worksheet for each team member.

- Allocate a moon phase to each person in the group.

- Plot the tide levels for each hour of your allocated day.

- Compare the charts and discuss findings.
