

Night time

Nocturnal animals are animals that are more active at night than during the day. Usually these animals sleep during the day. Many of these animals have very good eyes to help them see in the dark.

Circle the nocturnal animals

Draw your favorite nocturnal animals.

- | | |
|--------|--------|
| owl | cow |
| sheep | bat |
| mouse | possum |
| wombat | rabbit |
| lion | frog |

Brain Teasers

Where does the sun set? east / west

When are nights longer? summer / winter

What do you see at night? stars / sun / moon
blue sky / shooting stars / bats

Meteors and shooting stars

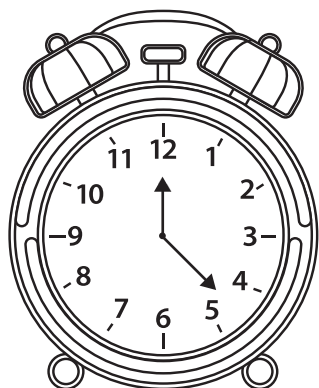

A meteor or shooting star is a brief streak of light in the night sky. They are pieces of rock from space that burn up when they enter the Earth's atmosphere.

Draw a picture of the night sky. Include the moon, stars and some shooting stars.

Number Crunchers

- Last night, Larry, Mona and Carl took turns to count shooting stars. Larry saw 5 stars, Mona saw 6 and Carl saw 4. How many shooting stars did they see altogether?
- Li sleeps for 9 hours and Ted 8 hours. How many hours do they sleep altogether?
- Every night, Sue's little brother goes to bed at 7 o'clock. Sue goes to bed 2 hours later. What time does Sue go to bed?
