Great Barrier Reef facts

The Great Barrier Reef is the world's largest coral reef.

It is located off the coast of Queensland in Australia and is over 2000 km in length .

It is a World Heritage Site.

The Great Barrier Reef can be seen from space.

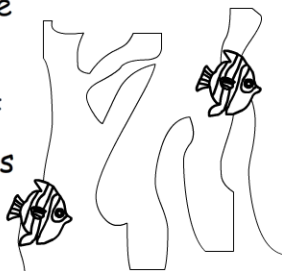

There are more than 700 islands and 2900 separate coral reefs.

The reef is built by living organisms, tiny hard corals that are no bigger than a fingernail.

When corals die their limestone skeletons build upon one another to form the base of the reef.

The oldest coral on the Great Barrier Reef is about 1,000 years old.

Do you know any more facts about the Great Barrier Reef?

Drawing

The Great barrier Reef has many different and colorful corals, fish, starfish, shells, turtles, crabs and other animals.

Draw a picture of part of a coral reef. Label some of the different creatures.

What is your favorite coral reef creature?
